

# There and Back Again

**Little Billy only knows how to add. Help him put his skill to better use.**

"I just want to add 5 and 3."

- Little Billy

"It's my Birthday, and Mommy cut my brownies in three one way and in four the other. Three and four is seven, but there's more brownies than that and I don't know why."

- Little Billy

"My tree house is 8 meters up and 15 meters away. I put the numbers together to get that it's 23 meters away, but Daddy says that's too far."

- Little Billy

"The hose takes 10 minutes to fill up the pool, and the bucket takes 15 minutes. But I'm going to do both at once!"

- Little Billy

"I want to put these two angles together. I measured them in rise over run like my teacher said to. One over two and one over three. But now I don't know what to do."

- Little Billy

"My spaceship would go really fast,  $1/19$  as fast as anything could ever go, and it would shoot a rocket that would go even faster,  $1/11$  as fast as anything could ever go. How fast would the rocket go, to my little sister on Earth?"

- Little Billy

"If only if only I could compute the negative of the two's complement of the sum of 12 and 18!"

- Little Billy
